

# **SECRICOM field demonstration on plenary meeting of NATO Civil Protection**

SECRICOM project presented the achievements made during first two years in an integrated emergency exercise. The demonstration was a part of plenary meeting of NATO Senior Civil Emergency Planning Committee in Middle Slovakia held on 27th - 29th September 2010.

The demonstration was conducted in cooperation with units of chemical, biological, radiological and nuclear (CBRN) protection from Luxembourg, Slovakia, Austria and Czech Republic. SECRICOM part was a radiation scenario, where Ardaco in cooperation with Qinetiq and Nextel provided communication and control of emergency response teams.

An international audience – professionals in civil protection of NATO states had the opportunity to see, listen and assess following technologies:

- On site deployable mobile network infrastructure
- Applications and devices for forward command post
- Interoperability between mobile phones, PDAs, computers and two different types of radios
- Different types of multimedia communication (pictures, text, voice)
- Localization of actors on map
- Secure cross-border communication between forward command post and remote expert from Spain
- Connectivity resilience between forward command post and remote control room

Additionally, the project review team of the European Commission discussed in detail achievements of the collaborative project.
